Moisture Block Underlayment

Basic Underlayment is a polyethylene foam underlayment that offers basic protection for laminate and wood floors. This pad provides a cost efficient product that is manufactured for the flooring industry with the highest quality cell structure. We combine low corrugation foam with a high-density laminated film to create a vapor/moisture resistant floor.

Moisture Block is a 6-mil thick polyethylene sheeting for additional moisture protection for laminate and wood flooring installed over concrete slab floors. Most flooring manufacturers recommend installing the film with the edges extending up the wall behind base trim to keep harmful moisture away from your floor.

Basic Underlayment FEATURES:

- Polyethylene Foam with special moisture resistant film on both sides.
- Economical.
- Humidity, Mold and Mildew resistant.
- Special moisture resistant film and self-sealing tape for additional moisture protection and ease of installation. To connect the rolls together using the self-sealing tape, simply join the extended film lip to the other end of the next roll by peeling off the liner of the adhesive tape and adhering it to the extended film lip.

Moisture Block FEATURES:

- For all brands of laminate and interlocking wood flooring
- Durable
- Self Sealing tape at seams for ease of installation.
