**KEEP YOUR PATIO
CLEAN AND DRY!**

Zip-UP UnderDeck is a derivative of the highly successful, highly innovative Zip-UP Ceiling System. This system finishes off the underside of your deck providing for dry space without sacrificing headroom or the beauty of your deck. The Zip-UP UnderDeck System provides all of the same advantages of the ceiling system including ease of installation, a washable mold resistant surface, while channeling any water from above to your gutter system.

- **Zip-UP UnderDeck™ is the best way to finish off you under deck living space**
- **Installation is simple with only a few common tools**
- **Zip-UP UnderDeck™ is a water tight water barrier that effectively channels water to a gutter system**
- **This system provides a flat clean finish that is unparalleled by any other deck finishing system**
- **No other system offers this much functionality at a low low price**

Zip-UP UnderDecks™ development was driven by consumer request for a product that did for finishing beneath decks what Zip-UP Ceiling has done for interior remodeling. All of the product advantages were carried over and then enhanced with exterior grade material.

INSTALLS IN 6 EASY STEPS!

- 1) **Attach pitching rails or preferred spacing measure for drainage.**
- 2) **Attach the wall trim around the perimeter of the room**
- 3) **Insert the first panel into the wall trim**
- 4) **Attach the first main rail to the first panel**
- 5) **Attach the first main rail to the ceiling joists**
- 6) **Attach the second panel to first main rail**

Repeat steps 4 - 6 across the room

5 COMPONENTS DO IT ALL!

- Wall Trim:** The "E" shaped trim that attaches to the walls or joists around the entire periphery.
- Main Rail:** These are the mounting pieces that will run the length of your deck attached to the pitching rails.
- Panel:** Refers to the show surface of your Zip-UP UnderDeck® System. The panels "Zip" into the Main Rails allowing for easy access for cleaning.
- Seam Trim:** This is the piece that allows for the extension of your UnderDeck application by capping the ends of Main Rails that do not end at Wall Trim. The next section is installed the same as the first.
- Pitching Rail:** Pitching rails are used to impart a slope of 1/8 inch per foot in order to properly drain your under deck system in the direction of your gutter. They come in 1 inch and 1/2 inch profiles and are stacked incrementally every 4 feet to provide proper pitch.
